Open up!

Whether going through doors, gates, barriers or turnstiles, the access area offers the first impression of each company. It is here that communication starts. On the one hand, when receiving visitors in a friendly way and, on the other hand, when providing in-company security. Global Intercom by Commend – in cooperation with the SSS SIEDLE product ranges – is the modern door management system with style. From the simple two-way intercom solution to comprehensive access control. With its sophisticated technical functions and its elegant design, Global Intercom by Commend is the ideal „electronic doorkeeper“.

Applications and advantages

The access area is a main element of Corporate Identity, thus of the individual company style. Global Intercom door management systems by Commend provide high-tech communication and security in the access area. From the door loudspeaker to letter-box facilities and control and information systems to access control.

Applications

- 1 → Door call at individual intercom stations or groups of stations
- 2 → Modern, aesthetically designed and functional reception solutions for offices, medical practices, agencies, etc.
- 3 → Doorkeeper workstations for clear and easy-to-handle door management
- 4 → Bell systems for office centres, old-age and residential homes, community practices, etc.
- 5 → Status supervision of doors and accesses
- 6 → Forwarding of door calls into the telephone network
- 7 → Internal and external access control systems
- 8 → Door and gate intercom systems integrated facility management systems

Advantages

- 1 → Full integration into the Siedle-Vario® overall system
- 2 → Excellent speech transmission also to loud areas
- 3 → Speaking and opening from all stations
- 4 → Forwarding of door calls into the public network, to network or mobile telephones
- 5 → Functions to be triggered via telephone with MFV keypad (e.g. open door, gates or barriers)
- 6 → Two-wire star cabling – fully digital
- 7 → Easy to upgrade and expand
- 8 → Door intercom stations can be integrated in facility management systems
- 9 → Adjustment to customer requests
- 10 → OpenDuplex® for natural communication, free of perturbation by background noise

The Overall System

Modern reception must carry out various tasks – Security Intercom offers a modular system for seeing, hearing, talking, reporting and controlling at doors, gates, barriers or turnstiles – for one access area or a hundred. They are always fully integrated into the intercom solution. Various intercom stations can be assigned as control stations to each access area.

Being equipped with various features, the complete functional range of door management is provided on a standard operator surface and is simple to operate for all users.

Hard facts

Today's list of specifications to be met by modern solutions of door and entrance communication is quite long. The answer is simple: Global Intercom by Commend. The range is clear and uniform, the design modern. Thus, Global Intercom offers a concept which offers individual solutions to entrance communication. Furthermore, the complete door and gate management system can be integrated into a facility management system.

Soft facts

•••• Assignment of control stations.

One or various intercom stations can be assigned to each entry area. From there all entry areas integrated in the overall system are operated and controlled. If several door stations ring at the same time, the operating stations are automatically assigned to the correct door station. The door is always opened with the same button. At the same time, the identification of the calling door station is displayed at the control station.

•••• Ringing function.

With Global Intercom various ringing functions are available.

Many-to-one: The call is carried out from the door station directly at a preselected control station. There the door call is received and processed.

Many-to-many: Calling is carried out from the door station at a number of intercom stations with a signal ringing on intercom stations. The door call can be received and processed by any control station. The ringing function can be switched over for certain periods of time.

•••• Automatic door-opening system.

For much-frequented doors it is possible to program them to automatically open with a delay after pressing the call button (day operation). This function can be switched off manually or via a timer (night operation).

•••• Call forwarding to telephone.

By using a telephone interface, door calls can be forwarded into the public telephone network and processed via a telephone with an MFV keypad.
